

JEREMIAS JAN GUT

Undergraduate Student in Computer Engineering at Universitat de Barcelona

jeremiasjgut@gmail.com | +34 616345391 | Barcelona, Spain

EDUCATION

Bachelor's Degree in Computer Engineering

Universitat de Barcelona

Barcelona, Spain

2021 – Expected June 2027

- Relevant Coursework: Operating Systems Administration, Computer Networks, Distributed Systems, Algorithms, App Development, Information Security & Hardening.

Scientific Baccalaureate – Mathematics and Physics/Chemistry (Mention: "Bien")

Lycée Français de Barcelone

Barcelona, Spain

2010 – 2021

EXPERIENCE

Student Intern / Trainee

Centro Nacional de Análisis Genómico (CNAG)

Barcelona, Spain

June 2019

- Completed an introductory training internship focused on learning foundational Python programming and algorithmic problem-solving within a genomics research center.

PROJECTS

TravelSkibidi | 1st Prize Winner – TravelPerk Challenge (HackUPC)

Django, Python, HTML/CSS, Web Tunneling / Reverse Proxy

May 2024

- Engineered an award-winning web platform in 36 hours matching travelers based on itinerary heuristics and shared profile datasets.
- Deployed the Django application live by configuring reverse-tunnel routing and host network rules to expose the local server securely to the public internet for judge evaluations.

GitGuide – Natural Language Interface for Git

Python, Git CLI, Speech-to-Text, NLP | HackUPC 2026 Functional Prototype

April 2026

- Built a terminal abstraction layer translating voice and natural language commands into verified Git operations.
- Integrated an intent-parsing engine with visual dry-run previews and execution confirmations to safeguard against repository conflicts and command errors.

Real-Time Distributed Ticketing System

Java, Python, Sockets, Concurrency | Distributed Systems

Fall 2026

- Architected a concurrent client-server ticketing backend coordinating live seat inventory synchronization across distributed user sessions.
- Mitigated race conditions and prevented double-booking states using synchronization locks, atomic allocations, and socket communication.

Planivesta & SyncroHome – Integrated Android Suite

Java, Android Studio, Google Firebase (Firestore & Auth), Software Architecture

Spring 2024 – 2025

- Developed **Planivesta** for an integrated software engineering course, featuring user authentication, cloud persistence, and real-time state synchronization via Google Firebase.
- Re-engineered the core system into **SyncroHome**, refining the architectural design and decoupling modules to optimize data synchronization and lifecycle state management.

LauzHack – Bristol Myers Squibb Time-Series Challenge

Python (NumPy, Pandas, Scikit-learn, PyTorch)

December 2024

- Developed end-to-end predictive time-series models for the Bristol Myers Squibb challenge, performing exploratory data analysis, dataset preprocessing, and feature engineering to evaluate forecasting accuracy.

TECHNICAL SKILLS & LANGUAGES

- **Systems & Infrastructure:** GNU/Linux (Debian/Ubuntu), Windows Administration, Bash Scripting, Git, Sockets, Virtualization.
- **Programming Languages:** Python, Java, C/C++, Bash, SQL, JavaScript, HTML/CSS.
- **Languages:** English (Native), Spanish (Native), Catalan (Native), French (Native), Czech (Native).
